

Third Semester- B.Tech. Course work
END SEMESTER EXAMINATION, November, 2024

ITMTC04/EIMTC04/ITMTC301/EIMTC301/INMTC04/INMTC301
Course title: Optimization principles and techniques

Time: 3 hours

Maximum Marks. 50

Note: Missing data/information(if any), may be suitably assumed and mentioned in the answer.

Q. No.	Attempt any two parts from each question	Marks	CO																														
1a	Formulate the following LPP and solve it graphically. A local cafe makes two specialty smoothies: Tropical Paradise and Berry Blast. The Tropical Paradise requires 2 mangoes and 1 pineapple, while Berry Blast involves a mix of 3 different berries (strawberry, blueberry, raspberry) and half a mango. The cafe has a daily supply of 30 mangoes and 18 pineapples. Due to blender capacity and staff constraints, they can only make 25 smoothies in total per day. Each Tropical Paradise sells for Rs.8 profit, while Berry Blast sells for Rs.7 profit. How many of each smoothie should they make to maximize profit?	5	CC																														
1b	Consider the problem: $\text{Max } 2x_1 + x_2 + 5x_3 - 3x_4$ subject to $x_1 + 2x_2 + 4x_3 - x_4 \leq 6$ $2x_1 + 3x_2 - 3x_3 + x_4 \leq 12$ $x_1, x_2, x_3, x_4 \geq 0$ Find a basic feasible solution with the basic variables as x_1 and x_2 . Also find the optimal basic feasible solution.	5	CO																														
1c	Solve the following LPP. $\text{Max } 3x_1 + 2x_2 + 4x_3$ subject to $x_1 - x_2 + x_3 \geq 4, \quad 2x_1 + x_2 - x_3 \geq 12, \quad x_1, x_2, x_3 \geq 0$	5	CO																														
2a	State Weak duality theorem. Use duality in solving the L.P.P. : $\text{Min } z = 2x_1 - x_2 + x_3 + 5x_4 - 3x_5$ subject to $4x_1 + 2x_2 + x_3 + x_4 = 3,$ $2x_1 + 2x_2 + x_3 + x_5 = 2$ $x_j \geq 0 \quad (j = 1, 2, 3, 4, 5)$	5	CO																														
2b	The following table provides all the necessary information on the availability of supply to each warehouse, the requirement of each market, and the unit transportation cost (in Rs) from each warehouse to each market. <table border="1" style="margin: 10px auto;"> <thead> <tr> <th></th><th>P</th><th>Q</th><th>R</th><th>S</th><th>Supply</th></tr> </thead> <tbody> <tr> <td>A</td><td>6</td><td>3</td><td>5</td><td>4</td><td>22</td></tr> <tr> <td>B</td><td>5</td><td>9</td><td>2</td><td>7</td><td>15</td></tr> <tr> <td>C</td><td>5</td><td>7</td><td>8</td><td>6</td><td>8</td></tr> <tr> <td>Demand</td><td>7</td><td>12</td><td>17</td><td>9</td><td>45</td></tr> </tbody> </table> The shipping clerk of the shipping agency has worked out the following schedule, based on his own experience: 12 units from A to Q, 1 unit from A to R, 9 units from A to S, 15 units from B to R, 7 units from C to P and 1 unit from C to R. (i) Check and see if the clerk has the optimal schedule. (ii) Find the optimal schedule and minimum total transport cost.		P	Q	R	S	Supply	A	6	3	5	4	22	B	5	9	2	7	15	C	5	7	8	6	8	Demand	7	12	17	9	45	5	CC

2c	Solve the assignment problem given by the following matrix: <table><tr><td></td><td>J_1</td><td>J_2</td><td>J_3</td><td>J_4</td></tr><tr><td>M_1</td><td>9</td><td>11</td><td>14</td><td>11</td></tr><tr><td>M_2</td><td>13</td><td>13</td><td>10</td><td>12</td></tr><tr><td>M_3</td><td>14</td><td>13</td><td>12</td><td>13</td></tr><tr><td>M_4</td><td>11</td><td>17</td><td>13</td><td>14</td></tr></table> Find the optimal assignment of jobs to machines to minimize the total cost. If Machine M_3 is not available, find an alternative optimal assignment and calculate the new minimum cost.		J_1	J_2	J_3	J_4	M_1	9	11	14	11	M_2	13	13	10	12	M_3	14	13	12	13	M_4	11	17	13	14	5	CO2
	J_1	J_2	J_3	J_4																								
M_1	9	11	14	11																								
M_2	13	13	10	12																								
M_3	14	13	12	13																								
M_4	11	17	13	14																								
3a	Write short notes on the following: (i) Saddle point of the game (ii) Mixed strategy vs pure strategy (iii) Two-person zero-sum game (iv) Minimax principle (v) Value of the game	5	CO3																									
3b	What are the basic assumptions behind game theory? When is the game said to be strictly determinable? Solve the following game using the graphical method. <table><tr><td>1</td><td>-3</td></tr><tr><td>3</td><td>5</td></tr><tr><td>-1</td><td>6</td></tr><tr><td>4</td><td>1</td></tr><tr><td>2</td><td>2</td></tr><tr><td>-5</td><td>0</td></tr></table>	1	-3	3	5	-1	6	4	1	2	2	-5	0	5	CO3													
1	-3																											
3	5																											
-1	6																											
4	1																											
2	2																											
-5	0																											
3c	State the relationship between game theory and linear programming. Hence, using the same or by an alternative method, solve the below payoff matrix: <table><tr><td>3</td><td>-1</td><td>-3</td></tr><tr><td>-3</td><td>3</td><td>-1</td></tr><tr><td>-4</td><td>-3</td><td>3</td></tr></table>	3	-1	-3	-3	3	-1	-4	-3	3	5	CO3																
3	-1	-3																										
-3	3	-1																										
-4	-3	3																										
4a	Solve using Gomory's method: Max $Z = x_1 - x_2$ subject to $x_1 + 2x_2 \leq 4$, $6x_1 + 2x_2 \leq 9$, $x_1 \geq 0$, $x_2 \geq 0$, x_1 and x_2 are integers	5	CO4																									
4b	Use Branch and Bound method to solve the ILP: Max $Z = 7x_1 + 9x_2$, subject to $-x_1 + 3x_2 \leq 6$, $7x_1 + x_2 \leq 35$, $x_1 \leq 7$, $x_2 \leq 7$, $x_1 \geq 0$, $x_2 \geq 0$, x_1 and x_2 are integers	5	CO4																									
4	Solve using Gomory's method: Max $Z = 2x_1 + x_2$, subject to $x_1 + x_2 \leq 5$, $6x_1 + 2x_2 \leq 21$, $x_1 \geq 0$, $x_2 \geq 0$, x_1 is integer. The optimal simplex tableau is given below. <table><tr><td>Basic</td><td>x_1</td><td>x_2</td><td>s_1</td><td>s_2</td><td>RHS</td></tr><tr><td>x_1</td><td>1</td><td>0</td><td>-1/2</td><td>1/4</td><td>11/4</td></tr><tr><td>x_2</td><td>0</td><td>1</td><td>3/2</td><td>-1/4</td><td>9/4</td></tr><tr><td>Z</td><td></td><td></td><td></td><td></td><td>31/4</td></tr></table>	Basic	x_1	x_2	s_1	s_2	RHS	x_1	1	0	-1/2	1/4	11/4	x_2	0	1	3/2	-1/4	9/4	Z					31/4	5	CO4	
Basic	x_1	x_2	s_1	s_2	RHS																							
x_1	1	0	-1/2	1/4	11/4																							
x_2	0	1	3/2	-1/4	9/4																							
Z					31/4																							
5a	(i) Define convex and concave functions mathematically along with examples. Give geometrical description of both. (ii) For what values of a, b, c and d , the function $f(x, y) = ax^2 + 2bxy + cy^2 + d$ is convex and for what values of a, b, c and d , the function $f(x, y)$ is concave.	2+3	CO5																									
5b	Solve the optimization problem: Max $Z = 7x_1^2 + 6x_1 + 5x_2$ subject to $x_1 + 2x_2 \leq 10$, $x_1 - 3x_2 \leq 9$, $x_1 \geq 0$, $x_2 \geq 0$.	5	CO5																									
5c	Solve: Min $Z = 6x_1^2 + 5x_2^2$ subject to $x_1 + 5x_2 = 3$, $x_1 \geq 0$, $x_2 \geq 0$.	5	CO5
